

Index to Volume 81

Subject Index

- A critique of the QCA specimen scheme of work for key stage 3 science, (297), 29
- A practical coffee-jar model of industrial fermentation, (294), 103
- A robotically controlled web camera, (297), 111
- A simple method for measuring seedling growth, (295), 113
- A water model for teaching about global warming, (294), 123
- acids and alkalis, (297), 89
- acid-base indicators, (295), 117
- Aldous Huxley and science education, (294), 85
- amino acid, (296), 119
- Anyone for bingo?, (295), 119
- Are atoms and molecules too difficult for primary children?, (295), 87
- ASE website, (297), 35
- astronomy, (295), 63; (296), 125
- astrophysics, (295), 63
- Bernard Courtois – chemistry and kelp, (294), 89
- Beyond 2000, (296), 12
- biology A-level, (297), 101
- biotechnology, (297), 77
- Bubbles in fizzy drinks, (295), 124
- butterflies, (294), 61
- Carbon monoxide – a microscale approach, (296), 116
- carbon monoxide detection, (296), 116
- carbon-60, (295), 37
- Cell and school activities – a useful analogy, (296), 111
- Changing science teachers' work: a question of professionalism, (297), 15
- Chanter, Edward Walton, (294), 101; (296), 17
- characteristics, current and pd, (297), 112
- chemical bonding, (294), 75
- chemical formulae, (294), 111
- chemistry demonstrations, (294), 71
- chemistry education, (297), 85
- Chemistry game, (295), 119
- Chemistry School, (295), 49
- Chemistry A-level, (296), 85
- children's images of scientists, (295), 17
- circuits, paper, (295), 126
- cognitive conflict, (294), 43
- colorimeter, (295), 117
- computer as oscilloscope, (294), 116
- concept maps, (296), 41
- conceptions about Earth and gravity, (296), 99
- conceptions – weather, (924), 55
- Confronting problems presented by photosynthesis, (297), 69
- coulometry, (294), 95
- Current and p.d. characteristics displayed on an oscilloscope, (297), 112
- curriculum change, (297), 15
- curriculum development, (294), 19
- Curriculum 2000 and beyond, (295), 12; (296), 12
- datalogging, (295), 128; (297), 118
- daughter products, (294), 124
- Detecting radon daughter products in school using a balloon, (294), 124
- detergent, (297), 99
- Developing a sixth-form science newspaper, (295), 111
- electric cells, (297), 103
- electric charge, (294), 95
- electric circuits, (295), 126
- Electric drama to improve understanding in science, (294), 35
- electromagnetism, (297), 122
- elements, compounds and mixtures, (296), 47
- Emergence and application of philosophy of chemistry in chemistry education, (297), 85
- English as a second language, (295), 79
- English literature, science education, (294), 9
- enzymes, (294), 114; (297), 105
- Evaluating students' understanding of chemical bonding, (294), 75
- fermentation, (294), 103
- field work, (294), 107
- fizzy drinks, (295), 124
- Fullerene and nanotube chemistry: an update, (295), 37; (296), 15
- games, (295), 119
- gas bubbles, (295), 124
- gender inclusivity, (296), 85
- genetic engineering, (297), 77
- genetics, (296), 69
- germination, (295), 113
- global warming, (294), 123
- GNVQs and the training of science teachers, (295), 73
- gourds, (296), 69
- gravity, (296), 99
- Greek children's alternative conceptions on weather and climate, (294), 55
- growth of seedlings, (295), 113
- halogens, (296), 112
- health and safety issues, (296), 37
- Heavy halogens, (296), 112
- Hillier, Douglas Venum, (295), 105
- homework, (294), 27
- human organ system, (297), 65
- Huxley, Aldous, (294), 85
- Hydrogen-bonding problems, (296), 117
- ICT, (295), 49; (297), 57
- ICT in science: problems, possibilities ... and principles?, (297), 57
- Ideas about ionisation energy: a diagnostic instrument, (295), 97
- Implications of students' questions for science teaching, (294), 49
- indicators, (295), 117
- inheritance, (296), 69
- Integrating multimedia into science teaching: barriers and benefits, (295), 49
- intermolecular hydrogen bonding, (296), 117
- internet, (294), 61; (297), 35
- Introducing SciShop – a resource bank for key stage 3 science, (297), 35
- Investigation of the zoom lens, (294), 118
- investigations, (294), 19
- iodine, (294), 89
- ionisation energy, (295), 97
- Is it a weak acid or a weakly acidic solution?, (297), 89
- Island: a novel*, (294), 85
- isoelectric point, (296), 119
- isomer, (297), 104
- Jones, John Goronwy, (295), 105
- key stage 3, (295), 79
- chemistry, (294), 111
- schemes of work, (297), 23, 29
- science, (294), 13; (297), 35, 45
- key stage 4, (295), 119
- physics, (294), 116
- science, (294), 13; (297), 13
- language, (295), 79
- Lead-acid battery – an investigation and recent developments, (297), 103
- Learning by doing – two classroom studies of pupils' preferred ways of learning science, (294), 27
- Lenz's law illustrated using single coils, (296), 122

- light-absorbance meter, (294), 114
- Literacy and secondary science – building on primary experience, (297), 45
- Logging the eclipse, (295), 128; (297), 117
- magnetic needle, (297), 122
- Mark–recapture using a population of pupils, (297), 101
- materials, (296), 61
- microscale chemistry, (295), 16, 122; (296), 116
- Microscale chemistry: introducing neutralisation and observing the effect of dilution on the rate of a reaction, (295), 122
- middle ear, workings of, (294), 12
- Model making and displays with empty pop bottles, (295), 114
- modelling
- biology, (295), 114; (297), 101
 - cell activities, (296), 111
 - cells, (296), 53
 - chemistry, (297), 110
 - global warming, (294), 123
 - human organs, (297), 65
 - isomers, (297), 104
- modern physics, (297), 51
- nanotubes, (295), 37
- National Curriculum, (294), 13; (296), 27
- neutralisation, (295), 122
- newspaper, (295), 111
- On problem situations and science learning, (294), 43
- optics, (294), 118
- Ornamental gourds help thinking about genetics, (296), 69
- oscilloscope, (294), 116; (297), 112
- Othen, Clifford Warne, (295), 105
- particulate nature of matter, (295), 87
- Personalised outdoor biology teaching, (294), 107
- pH, (297), 89
- philosophy of chemistry, (297), 85
- phosphatase, (297), 105
- photosynthesis, (297), 69
- physics pre-16, (297), 51
- Pinning down that ‘end-point’: making an inexpensive light-absorbance meter, (294), 114
- pop bottles, (295), 114
- post-16, (295), 111
- potassium nitrate, (294), 89
- primary school students, (295), 87; (296), 99
- problem solving, (294), 43
- Procedural understanding: its place in the biology curriculum, (294), 19
- professionalism of science teachers, (297), 15, 23, 29
- pupil-referral units, (295), 55
- Pupils’ understanding of some non-technical words in science, (295), 79
- QCA, (297), 23, 29
- QCA key stage 3 science scheme of work – a teacher’s view, (297), 23
- questioning, (296), 79
- questioning styles, (294), 49
- questions, (294), 49; (296), 79
- radioactivity, (294), 124
- rate of reaction, (295), 122
- Recognising the social dimension, (296), 14
- Rinse-aid and the starch–iodine reaction, (297), 99
- robot, (297), 111
- role-play – electricity, (294), 35
- Role-playing in astronomy, (296), 125
- safety, (296), 37
- Salters’ curriculum projects and gender inclusivity in science, (296), 85
- science education and social responsibility, (295), 14
- Science education in Aldous Huxley’s tropical island of Pala, (294), 85
- science fiction, (296), 109
- Science has its own values, (296), 15
- Science in schools: time to pause for thought?, (295), 21
- science in society, (296), 85
- Science in the new millennium, (296), 17
- Science provision in pupil-referral units, (295), 55
- SciShop, (297), 35
- Science: the third core subject, (297), 13
- Secondary school students’ difficulties with stoichiometry, (296), 91
- Secondary science teaching under the National Curriculum, (296), 27
- Selecting acid-base indicators, (295), 117
- Shopping with symbols, (294), 111
- Short-circuit electric-circuit making with paper circuits, (295), 126
- ‘Sn₃O₄’: a mixed oxide of tin, (294), 109
- solar eclipse, (295), 128; (297), 117
- special needs, (295), 55; (296), 37
- Stable states, (297), 104
- Star Wars biology: why are Wookies so hairy?, (296), 109
- starch-iodine complex, (297), 99
- stoichiometry, (296), 91
- Student-teachers’ grasp of science concepts, (295), 67
- students’ ideas about photosynthesis, (297), 69
- students’ ideas about biotechnology and genetic engineering, (297), 77
- students’ ideas about stoichiometry, (296), 91
- students’ ideas – gravity, (296), 99
- students’ understanding, (295), 21
- subject knowledge, (295), 67
- Symmetry in electromagnetism – a new magnetic needle, (297), 122
- teacher training, (295), 67, 73
- Teachers’ questions – types and significance in science education, (296), 79
- Teaching science to pupils with special needs – health and safety issues, (296), 37
- teaching strategies, (294), 27, 107; (296), 27, 61, 79
- Teaching with tabards, (297), 65
- technology, (295), 29
- The best enzyme experiment ever? Probably, (297), 105
- The Butterfly ‘Sight’ – using the Internet in education, (294), 61
- The consistency of primary children’s conceptions about the Earth and its gravity, (296), 99
- The history and some applications of coulometry, (294), 95
- The isoelectric point of an amino acid, (296), 119
- The state we’re in: issues in key stage 3 and 4 science, (294), 13
- The use of modelling for improving pupils’ learning about cells, (296), 53
- Thomas Young’s double-slit experiment, (296), 123
- Thunder and lightning: a lecture-demonstration for all ages, (294), 71
- tin oxides, (294), 109
- Total eclipse of the Sun: measurements of the variation in intensity and temperature, (297), 117
- Toys for the boys whilst the girls learn science and technology, (295), 29
- Two simple models to aid the understanding of mechanisms in organic chemistry, (297), 110
- Understanding physical and chemical change: the role of speculation, (296), 61
- Using a computer as an oscilloscope, (294), 116
- Using concept maps to reveal understanding: a two-tier analysis, (296), 41
- values in technology, (295), 29
- visual aid, (297), 65
- vitamin C, (294), 103

Vokins, Michael, (296), 105
 weather, (294), 55
 web camera, (297), 111
 websearch, (294), 140; (295), 141;
 (296), 142; (297), 139
 What happened to modern physics?,
 (297), 51
 What ideas do students associate with
 'biotechnology' and 'genetic
 engineering'?, (297), 77
 Who were they? Clifford Warne Othen,
 Douglas Vernum Hillier, John
 Goronwy Jones, (295), 105
 Edward Walton Chanter, 1909-1997,
 (294), 101; (296), 17
 Michael Vokins and Nuffield
 Advanced Chemistry, (296), 105
 Richard Wormell, (297), 93
 Wookies, (296), 109
 Words or pictures?, (296), 47
 Work experience for astrophysicists,
 (295), 63
 Wormell, Richard, (297), 93
 Young's double-slit experiment, (296),
 123
 zoom lens, (294), 118
